

# What equipment does my classroom/studio need to use eNovativePiano?

## Minimum Requirements

- Internet access
- Teacher computer/laptop/tablet/mobile device
- Projection system, especially if using eNovativePiano with a group where the students don't have personal devices. This could be a ceiling mounted projector or one on a cart, or it could be a TV monitor mounted to the wall or on a cart. It could also be an interactive smart board.

## Nice to Have

- Computer/laptop/tablet/mobile device for each student so that eNovativePiano can be accessed individually during class time, allowing for more independent work. However, many of our institutional users use eNovativePiano quite successfully with only a teacher computer and a projector.
- Webcams (HD1080) and mounts for teacher demonstration to the class. (4 would be ideal, overhead, left, right, pedal)
- Document Camera for displaying scores
- Classroom Printer

## Apps

- [Classroom Maestro](#) keyboard emulation software.
- [Open Broadcaster Software \(OBS\)](#) to display multiple scenes to the class.
- Audio and/or MIDI Recorder to have students record audio and MIDI files during class time for submission. Examples include [Red Dot Forever](#), Garage Band, or [Audacity](#).

## Miscellaneous

- Cables and Switches. Cables will be needed for various connections, depending on your system. An HDMI Switch provides the ability to switch between the different displays (computer, keyboard, document camera)
- Headphones/Ear Buds. [Click to learn how students can hear audio from both their keyboard and eNovativePiano while using headphones.](#)
